John Kenneth C. Gangoso

Submitted to:

Dr. Adomar L. Ilao

Overview of the Practicum Engagement

Company Background

City Government of Biñan

Figure 1. Biñan City Hall

The City Government of Biñan serves as the local governing body dedicated to providing efficient, transparent, and citizen-centered public services to the people of Biñan. Guided by its commitment to good governance and sustainable development, the City continuously embraces digital transformation to enhance government operations, streamline service delivery, and strengthen citizen engagement. By leveraging innovative technologies and modern solutions, the City Government of Biñan aims to build a smarter, more connected, and future-ready community for all Biñanenses.

Information and Communications Technology Office (ICTO)

Figure 2. ICTO Logo

The student interned at Information and Communications Technology Office (ICTO) of the City Government of Biñan, located at San Pablo St., Barangay Zapote, Biñan, Laguna, Philippines. The ICTO is one of the offices under the local government unit (LGU) responsible for planning, developing, implementing, and maintaining the city's information and communications technology infrastructure and digital services. As the central ICT office of the City Government, it supports various departments by providing technical assistance, systems development, network administration, hardware and software maintenance, cybersecurity support, and digital transformation initiatives that improve the efficiency and quality of public service delivery.

The office plays a significant role in modernizing government operations through the implementation of innovative information systems, automation of administrative

processes, and maintenance of the city's technological resources. ICTO also ensures the reliability, security, and availability of government information systems, enabling departments to perform their functions efficiently while delivering accessible and responsive services to the public.

Figure 3. National ICT Month 2026

Committed to promoting innovation and continuous improvement, the Information and Communications Technology Office provide students and interns with valuable opportunities to gain practical experience in a professional government environment. Through hands-on involvement in system development, technical support, multimedia production, infrastructure maintenance, and other ICT-related projects, interns are able to apply their academic knowledge to real-world situations while developing technical, communication, and professional skills. This practical exposure allows student interns to

better understand the role of information technology in public service and prepares them for future careers in the ICT industry.

Nature Assignments or Tasks Given

During my internship at the Information and Communications Technology Office (ICTO) of the City Government of Biñan, I was assigned to the Application Development & Creative Support Team, a hybrid team responsible for developing and maintaining digital solutions while producing creative materials that support various offices and initiatives of the local government. This assignment provided me with valuable exposure to both software development and multimedia production, allowing me to apply the knowledge and skills I acquired throughout my academic studies in a professional government environment.

As part of the Application Development & Creative Support Team, I participated in the design, development, and enhancement of the Binan Access Card System, intended to improve the efficiency of government services, targeting to give every household their benefits, focused on the distribution of subsidies. My responsibilities included assisting in the development of system features, implementing user interface components, testing application functionality, identifying and resolving software issues, and collaborating with team members to ensure that project requirements were met. Throughout the development process, I became familiar with professional software development practices, including requirement analysis, debugging, version control, documentation, and iterative improvements based on user and supervisor feedback.

In addition to application development, I also assisted in the creation of multimedia and graphic design materials used for official publications, digital announcements, social media

content, presentations, and promotional campaigns of the City Government of Biñan. These tasks required creativity, attention to detail, and adherence to the city's branding and communication standards. I was also actively involved in the creative support functions of the team by producing various multimedia and graphic design assets for a K–12 educational game assigned to the department. My responsibilities included designing and illustrating visual elements such as user interface components, game backgrounds, icons, character assets, educational graphics, and other digital resources that enhanced both the functionality and visual appeal of the game. Each asset was created with careful consideration of educational objectives, age-appropriate design principles, and user engagement to provide an interactive and enjoyable learning experience for students. Through this project, I strengthened my skills in digital illustration, graphic design, visual communication, and asset optimization while gaining valuable experience collaborating with developers and other team members in integrating creative assets into an educational software application.

Total Hours Rendered

The table below presents the different phases of the internship program at the Information and Communications Technology Office (ICTO), highlighting the primary focus of each phase and the corresponding number of hours completed. The program was structured to provide a progressive learning experience, beginning with orientation and foundational training before advancing to hands-on technical tasks and culminating in full participation in real-world projects that supported the office's operations.

Internship Phase/ Component	Description	Hours Rendered
Company Orientation and ICTO Onboarding	Orientation on the City Government of Biñan, ICTO policies, workplace guidelines, organizational structure, and internship objectives.	48
Application Development and Creative Support	Hands-on participation in application development, system enhancement, software testing, UI implementation, and the creation of multimedia assets for the department's K–12 educational game and other ICTO projects.	342
Technical Documentation	Preparation and maintenance of technical documents, project documentation, reports, and other supporting materials related to assigned tasks.	48
Professional Development and Other ICT-Related Activities	Participation in seminars, mentoring sessions, collaborative meetings, knowledge-sharing activities, and other ICT-related training conducted by the office.	48
Total		486

Table 1. Summary of Hours Rendered

Each phase of the internship was carefully structured to provide a progressive and comprehensive learning experience that combined technical training with practical workplace exposure. The internship officially commenced on April 29, 2026, and will conclude on July 29, 2026, with a total of 486 hours rendered. The initial phase focused on company orientation and familiarization with the organizational structure, policies, workplace procedures, and the functions of the Information and Communications Technology Office (ICTO), providing a strong foundation for the succeeding phases of the practicum.

The second and most extensive phase consisted of hands-on application development and creative support tasks, where I was assigned to the Application Development & Creative Support Team. During this period, I participated in the development and enhancement of software applications, assisted in software testing and implementation, and collaborated with team members on various ICTO projects. In addition, I designed and developed numerous multimedia assets for

a K–12 educational game assigned to the department, contributing visual elements such as user interface components, game assets, icons, backgrounds, and educational graphics that supported the project's objectives.

Alongside these technical responsibilities, I also prepared technical documentation related to assigned projects and participated in various ICT-related training activities, collaborative meetings, and knowledge-sharing sessions that further enhanced my professional and technical competencies. These experiences strengthened my software development, multimedia design, communication, teamwork, and problem-solving skills while providing valuable insight into how information technology supports efficient and innovative public service. Overall, the internship equipped me with practical experience, reinforced the concepts learned throughout my academic studies, and prepared me for future opportunities in the information technology profession.

Presentation of Output

Application Development: Biñan Access Card

Figure 4. Biñan Access Card Portal

A CodeIgniter 4 application for managing family/member access-card records, assistance services, and audit trails for the (CSWD) City Social Welfare and Development – City of Biñan.

Figure 5. Dashboard

Figure 6. Manage Records: Importing of Data

Figure 6 presents the Manage Records feature of the system, which enables authorized personnel to import beneficiary records from Microsoft Excel into the database. Since the data maintained by the City Social Welfare and Development (CSWD) Office of the City Government of Biñan are initially prepared and updated manually using Excel spreadsheets, this feature streamlines the process of transferring large volumes of information into the system without requiring manual re-entry. Upon importing a valid Excel file, the system automatically reads and processes the data, making the records immediately available within the dashboard and other relevant modules. This functionality minimizes encoding errors, reduces processing time, and ensures that the information displayed in the system remains consistent with the latest records provided by the CSWD office, thereby improving the overall efficiency and accuracy of data management.

The screenshot displays the 'New Family Record' form within the 'Manage Records' module. The form is divided into two tabs: 'Head of Family' (active) and 'Members'. The 'Head of Family' tab contains the following sections:

- Personal Information:** Includes fields for Last Name, First Name, Middle Name, Suffix, Date of birth, Sex, Civil status, Contact number, Religion, Education, Job, Monthly income, Address, Barangay, and QR Number.
- Sectors and Services:** Contains two sub-sections:
 - Sectors:** A list of checkboxes for various sectors: LGBT+ LGBTQIA+, OFW - Overseas Filipino Worker, IP - Indigenous People, IDP - Internally Displaced Person, PDL - Persons Deprived of Liberty, OTHER - Other Sectors, and TS - Trans.
 - Services and Programs Available:** A list of checkboxes for various services: BAW (CHILDREN), B1 - Balaig Pag-Asa, B2 - ECCD, B3 - Supplementary Feeding Program, EMERGENCY / DISASTER ASSISTANCE PROGRAMS, EDAS - Cash Assistance, and EDAS - Cash for Work.

The background shows a list of existing family records with columns for QR NO., Last Name, First Name, Middle Name, Suffix, Date of birth, Sex, Civil status, Contact number, Religion, Education, Job, Monthly income, Address, Barangay, and QR Number. The interface includes a sidebar with navigation options like Dashboard, Manage Records, Sector Management, Services and Programs, Manage Categories, QR CODE, Generate, Scan, Management, Reports, Account Management, and Audit Trails. The top right corner shows the user's name 'Administrator_Mel'.

Figure 7. Manage Records: Managing Imported Records

Figure 8. Updated Dashboard

Figure 9. Sector Management

Figure 12. Generated QR Codes per Family Head

Figure 13. Access Card Scanner Module UI

Figure 13 illustrates the proposed user interface design for the Biñan Access Card Scanner module, which was developed as part of the enhancement of the Biñan Access Card System. After completing our initial multimedia assignments, our team was assigned to contribute to the system's

development, with the objective of improving the distribution process for government assistance, subsidies, and other social welfare programs. The feature includes the generation of unique QR codes for each registered family head, allowing authorized personnel to quickly verify beneficiary information during distribution activities through a dedicated scanner application.

As my primary responsibility within this project, I designed the user interface and user experience (UI/UX) of the scanner module to provide a clean, intuitive, and efficient workflow for end users. The proposed interface was created to display essential beneficiary information immediately after scanning a QR code while maintaining a simple layout that minimizes user interaction and supports faster verification during field operations. Although the interface remains in the mockup and refinement stage, it was designed based on the functional prototype currently being used by the development team. The mockup serves as the planned visual enhancement for the existing implementation and is intended to improve usability, readability, and overall user experience once integrated into the production version of the system.

Figure 14. Server-Scanner Simulation

Figure 15 shows the ongoing simulation and testing of the server–scanner architecture for the Biñan Access Card System. The simulation was conducted to validate the communication between the central server and multiple scanner stations before the feature's deployment. In this setup, a designated server computer manages the centralized database and processes all scanned transactions, while each client computer or laptop operates a scanner module through an assigned scanner account. During the distribution of subsidies, goods, or other assistance programs, authorized personnel scan the beneficiary's QR code using the client application, and the transaction is immediately transmitted to the server for validation, recording, and monitoring. This architecture enables multiple scanner stations to operate simultaneously while maintaining a centralized repository of records, ensuring real-time synchronization, efficient transaction processing, and accurate monitoring of all distribution activities. The simulation also served as a means of evaluating the system's functionality, reliability, and readiness for implementation in an actual distribution environment.

Figure 15 Reports Module

Figure 16. Account Management Module

Multimedia & Graphic Design Materials: K-12 Educational Game

Figure 17. Godot Engine

Figure 17 shows the initial familiarization stage of the game development environment using the Godot Engine, which serves as the primary game engine utilized by the Application Development & Creative Support Team for the development of the department's K–12 educational game. At the beginning of the internship, we were instructed to explore the engine's interface, project structure, scene hierarchy, and asset integration process to better understand the team's development workflow. As part of the onboarding process, we were also provided with the existing project files and the original graphic assets used in the game. Examining these resources allowed us to study the team's established design standards, asset organization, visual style, and implementation process before creating new materials. This familiarization phase served as an important foundation for subsequent tasks, enabling us to produce multimedia assets that were visually consistent with the existing game and readily compatible with the development pipeline.

Figure 18. Sample Weekly Progress Report

Figure 19. Shared Google Drive Repository for K–12 Educational Game Assets

Figures 18 and 19 present the team's weekly progress reporting and asset submission workflow throughout the multimedia development phase of the internship. To ensure that project milestones were achieved on schedule and that completed outputs were properly monitored, all interns were required to prepare and submit a weekly progress report summarizing the tasks accomplished, work in progress, challenges encountered, and targets for the succeeding week. In addition, all completed graphic assets were uploaded to the department's designated shared drive, which served as the central repository for organizing, reviewing, and managing project files. This workflow enabled supervisors and team members to monitor individual progress, provide timely feedback, and ensure that all assets remained accessible and synchronized with the development team.

As part of the student's assigned responsibilities, the student was tasked with developing the multimedia assets for the Grade 5 and Grade 7 English (4th Quarter) modules of the K–12 educational game. Each grade level consisted of ten (10) learning topics, and every topic was composed of three (3) progressively challenging stages, resulting in a substantial number of game screens and graphical assets that had to be designed and organized. My work included creating

user interface elements, backgrounds, icons, illustrations, educational graphics, and other visual components while ensuring consistency with the project's established art style and educational objectives. Upon completion of each topic or stage, the corresponding assets were uploaded to the shared drive and documented in the weekly progress report, allowing the development team to integrate the graphics efficiently into the game and monitor the completion status of each learning module.

Figure 20. "Bida ang Privacy" Poster Designed for the ICTO Contest Entry

Figure 20 presents the poster designed by the student for the Information and Communications Technology Office's (ICTO) participation in the "Bida ang Privacy" poster and infographic-making campaign. As part of the department's creative support initiatives, the student

was assigned to conceptualize and produce a visual material that effectively communicated the importance of data privacy, responsible handling of personal information, and cybersecurity awareness. The poster was designed by incorporating relevant visual elements, typography, and color schemes that aligned with the campaign's theme while ensuring that the message was clear, engaging, and easily understood by the target audience. Throughout the design process, the student applied principles of visual communication, layout composition, and graphic design to create a material that was both informative and visually appealing. This task provided valuable experience in producing promotional materials for an actual government campaign and demonstrated how multimedia design can be utilized to support public awareness and community engagement initiatives.

Synthesis of the Practicum Engagement

Learnings

Throughout the practicum engagement at the Information and Communications Technology Office (ICTO) of the City Government of Biñan, the student acquired a diverse set of technical and professional skills through active participation in software development and multimedia production projects. One of the most significant learning experiences involved contributing to the development of government information systems, where the student gained practical exposure to application development workflows, user interface (UI) and user experience (UX) design principles, software testing, system enhancement, and collaborative development practices. Designing interfaces for the Biñan Access Card Scanner Module provided a deeper understanding of how usability, accessibility, and efficient workflows influence the overall effectiveness of digital solutions, particularly for systems intended to be used by government personnel during public service operations.

The practicum also strengthened the student's multimedia design competencies through the creation of visual assets for the department's K–12 educational game. By utilizing the Godot Engine and studying the team's existing asset pipeline, the student learned how multimedia resources are planned, organized, and integrated into an interactive educational application. Developing assets for the Grade 5 and Grade 7 English modules required careful consideration of educational objectives, visual consistency, age-appropriate design, and user engagement. This experience enhanced the student's abilities in digital illustration, graphic design, visual

communication, and asset optimization while reinforcing the importance of maintaining consistency across multiple stages and learning topics.

In addition to technical development, the student gained valuable experience in technical documentation, project monitoring, and collaborative workflows. Preparing weekly accomplishment reports, organizing project assets within a shared repository, participating in meetings, and coordinating with supervisors and fellow interns emphasized the importance of documentation, version management, and effective communication throughout the software development lifecycle. Collectively, these experiences provided a broader understanding of how multidisciplinary teams collaborate to develop, maintain, and continuously improve information systems that support government operations and public service delivery.

Realizations

Throughout the internship, the student realized that successful software development extends beyond writing functional code or producing visually appealing designs. Every feature, interface, and multimedia asset must ultimately address the needs of its intended users while contributing to the overall objectives of the project. Working within the Application Development & Creative Support Team demonstrated how software developers and multimedia designers must collaborate closely to produce systems that are not only technically reliable but also intuitive, accessible, and engaging for end users. This realization became especially evident while designing the scanner interface for the Biñan Access Card System, where user experience and operational efficiency were equally as important as system functionality.

The practicum also highlighted the importance of adaptability and continuous learning in the information technology profession. Although the student initially focused on multimedia development, responsibilities eventually expanded to application development tasks as project priorities evolved. This transition required learning new technologies, understanding existing systems, and adapting to different project requirements within a relatively short period. Furthermore, creating assets for the K–12 educational game reinforced the importance of following established design standards and maintaining consistency throughout large-scale projects, while participation in weekly progress reporting emphasized accountability, organization, and effective project management.

Perhaps the most meaningful realization was recognizing the impact that information technology can have on public service. Unlike academic projects developed solely for demonstration purposes, the systems and multimedia resources produced during the internship were intended to support actual government programs and improve service delivery to the community. Contributing to initiatives such as the Biñan Access Card System and the educational game provided a greater appreciation for the role of technology in promoting efficiency, accessibility, and innovation within local government operations.

Conclusion

In conclusion, the practicum engagement at the Information and Communications Technology Office (ICTO) of the City Government of Biñan provided the student with a comprehensive learning experience that successfully bridged academic knowledge with professional practice. Through involvement in application development, UI/UX design,

multimedia asset production, technical documentation, and collaborative software development activities, the student developed both the technical competencies and workplace skills expected of an information technology professional. Exposure to real-world government projects allowed the student to understand the complete development process—from planning and design to implementation, testing, documentation, and continuous refinement.

Beyond technical knowledge, the practicum strengthened essential professional qualities such as communication, teamwork, adaptability, time management, accountability, and attention to detail. Working within a multidisciplinary team demonstrated the value of collaboration in delivering reliable and user-centered digital solutions, while regular progress reporting and project documentation reinforced the importance of maintaining organized and transparent workflows. The experience also cultivated confidence in working with unfamiliar technologies and adapting to changing project requirements in a professional environment.

Overall, the practicum served as a significant milestone in the student's academic and professional development. It provided meaningful opportunities to contribute to projects that support public service while reinforcing the importance of continuous learning, innovation, and professionalism in the field of information technology. The knowledge, skills, and experiences gained throughout the internship have established a strong foundation for future endeavors in software development, user experience design, and digital solutions that create meaningful impact within organizations and the communities they serve.

EDUCATION

MAPÚA MALAYAN COLLEGES LAGUNA

Cabuyao City

BS Information Technology

2026

Focus Areas: Software Engineering, Mobile Application Development, and IoT Solutions

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Operating Systems, Database Systems, Web & Mobile Development

WORK EXPERIENCE

CITY GOVERNMENT OF BIÑAN

Biñan City, Laguna

Software Development Intern

Apr 2026 – Aug 2026

- Collaborated with a multidisciplinary team of OJT trainees in a hybrid development environment to deliver software and multimedia solutions for local government initiatives.
- Contributed to the development of the Biñan Access Card web application by designing and implementing user interface components, improving usability and accessibility for beneficiaries.
- Developed the QR code scanning functionality used during subsidy distribution, enabling efficient beneficiary verification and streamlined transaction processing.
- Created digital illustrations, interface assets, and educational game resources for a K–12 learning application commissioned by the department.
- Participated in UI design, feature testing, debugging, and iterative improvements through regular team collaboration and feedback sessions.

IQOR PHILIPPINES

Sta. Rosa, Laguna

Customer Service Representative

Jan 2021 – Jul 2021

- Maintained 92% CSAT while resolving technical issues.
- Improved first-call resolution through effective troubleshooting and communication.

PROJECTS

AIR ALERT – MOBILE-BASED INDOOR AIR QUALITY MONITORING

2026

- Lead development of Android app integrated with Arduino/Wemos and air-quality sensors.
- Implemented real-time monitoring, alerts, dashboards, and database integration.

BIÑAN ACCESS CARD SYSTEM

2026

- Developed as part of an internship with the City Government of Biñan.
- Contributed to UI implementation and user experience improvements.
- Implemented QR code scanning to support beneficiary verification and subsidy distribution.
- Collaborated using Git and GitHub in a team-based development workflow.

LEADERSHIP & ACTIVITIES

MALAYAN WARLOCKS ESPORTS CLUB

Cabuyao City

Officer 2015 – 2020

- Co-founded and helped organize the college's esports organization to promote competitive gaming and student engagement.
- Planned and managed collegiate esports tournaments and community events in collaboration with officers and participants.
- Designed promotional materials, event graphics, and social media content to increase event visibility and participation.
- Managed the organization's social media platforms, creating announcements and maintaining consistent online engagement.
- Represented the organization as a competitive player in intercollegiate esports tournaments.

ADDITIONAL

Technical Skills: Proficient in Kotlin, Jetpack Compose, PHP, MySQL, HTML/CSS, Arduino, UI/UX; Familiar with Python, Git, REST APIs, Cloud Computing Fundamentals, Networking and Graphic Design.

Certifications: Cisco CCNA: Introduction to Networks; Cisco CCNA: Switching, Routing, and Wireless

Languages: English (Professional), Filipino (Native)

Appendix B

Endorsement Letter

28 April 2026

Hon. Angelo B. Alonte, MPA

City Mayor

City Government of Biñan

Brgy. Zapote, Biñan City, Laguna

Thru: **Ms. Jenny Anne B. Sarmiento**

Department Head, CHRDO

Dear **Hon. Alonte**,

The B.S. in Information Technology program of Mapúa Malayan Colleges Laguna requires their students to undergo Practicum program for a minimum of **486** hours in an academic calendar that will prepare our students to be job-ready after completing their curriculum. This program intends to enable our students to acquire and practice the knowledge and skills expected of a graduate of a B.S. IT program which, in turn, would guarantee continuous supply of IT professionals needed by your company.

We believe that your company can provide the relevant exposure necessary for our students to achieve the intended learning outcomes for the B.S. in Information Technology program. In this regard, I would like to endorse **Mr. John Kenneth Gangoso** to have his practicum activities in your company as requested.

We thank you for your confidence and trust with us and we look forward to a more meaningful linkage that is mutually beneficial to our students and your company.

With warm regards,
